# AAV6 VP2, Recombinant Protein

Catalog # VP2-A5147

#### Synonym

VP2

### Source

AAV6 VP2, Recombinant Protein(VP2-A5147) is expressed from E. coli cells. It contains AA Thr 137 - Leu 736 (Accession # <u>056137-1</u>). Predicted N-terminus: Met

## **Molecular Characterization**

Poly-his VP2(Thr 137 - Leu 736) 056137-1

This protein carries a polyhistidine tag at the N-terminus.

The protein has a calculated MW of 68.2 kDa. The protein migrates as 65-80 kDa when calibrated against <u>Star Ribbon Pre-stained Protein Marker</u> under reducing (R) condition (SDS-PAGE).

### Endotoxin

Less than 1.0 EU per  $\mu g$  by the LAL method.

### Purity

>90% as determined by SDS-PAGE.

#### Formulation

Lyophilized from 0.22  $\mu$ m filtered solution in 6 M Urea, PBS, pH7.3 with trehalose as protectant.

Contact us for customized product form or formulation.

### Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

#### Storage

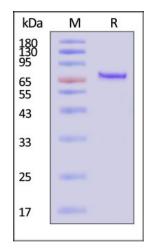

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please avoid repeated freeze-thaw cycles.

This product is stable after storage at:

- -20°C to -70°C for 12 months in lyophilized state;
- -70°C for 3 months under sterile conditions after reconstitution.

# **SDS-PAGE**

AAV6 VP2, Recombinant Protein on SDS-PAGE under reducing (R) condition. The gel was stained with Coomassie Blue. The purity of the protein is greater than 90% (With <u>Star Ribbon Pre-stained Protein Marker</u>).

## Background

Adeno-associated virus is a single-stranded DNA virus and the current scientific consensus is that it does not cause any human disease. It consists of a protein capsid (CAPside) and a 4.7 KB length single stranded DNA genome. The protein capsid consists of three subunits, VP1, VP2, and VP3.

**Clinical and Translational Updates**
